

**SMART WATER METER
CLAMP-ON ULTRASONIC
LoRaWAN MODEL 100-RF-WAN**

bluebot®

**Ultimate connectivity
Greatest pipe size & type capability**

Get Your Water Data from Anywhere
Ultimate Connectivity Range and Best Reliability

Ideal for homes, businesses, commercial, light industrial, and agricultural applications. Now, you can cost-effectively establish a reliable flow metering network across your entire property or facility without the need for Wi-Fi or repeaters at each meter installation point. By leveraging proven Long-Range (LoRa) technology, the LoRa Radio Frequency-enabled Bluebot can auto-connect at a distance of 300 meters or more from your internet access point. You can continue to enjoy the signature Bluebot non-invasive flow meter installation, which supports the broadest range of pipe sizes and types.

The Wide Area Network (WAN) solution (Model:100-RF-WAN + LoRaWAN gateway) leverages a high performance LoRaWAN Gateway that is plugged into your router. Clamp-on and power up multiple Bluebot flow meters within the effective range of the gateway, and each unit automatically connects to the Bluebot Smart Flow Cloud ensuring reliable data flow to the app.

LoRaWAN, short for Long Range Wide Area Network, is a wireless technology tailored for long-distance, low-power communication among IoT devices.

In contrast to Wi-Fi, it excels in providing extended range and energy-efficient connectivity, making it an ideal choice for applications in smart homes, smart buildings, smart cities, agriculture, and industrial monitoring.

Flow Meter Dimensions

Length: 10.8cm | 4.25"
Width: 12cm | 4.75"
Weight (Loose): 0.36kg | 0.8lbs
Height: 5.7cm | 2.25"
Clamps open: 13.3cm | 5.25"
Clamps closed: 5.7cm | 2.25"

Installation

Installation time: Up to 10 minutes
Installation method: Clamp-on, surface mount, no pipe cutting required
Install orientation: Any angle, horizontal, vertical
3-step installation: 1. Survey 2. Connect to network 3. Clamp on pipe

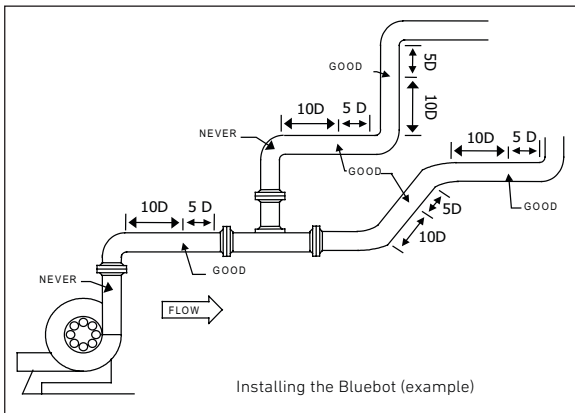

General

Measured fluid: Water, grey water
Operating temperatures: 0° C to 50° C | 32° F to 122° F
Enclosure ratings: IP67, NEMA 6
Flow technology: Transit-time ultrasonic
Patents: US 105510231

Indoor & outdoor use:

Material composition:

Power parameters

Power operation:
Plug type:
Cable length:
Cable color:
Plug into unit:
Input voltage:

Suitable for indoor and outdoor use. Rated IP67: water, splash, dust and UV-resistant with conformal coated waterproof electronics as a best practice.
The device is an injection molded plastic shell with CNC acrylic case housing the piezoelectric sensor train and software-driven servo DC motor. Additional components include gel pads made from silicon, electronics made from fiberglass, copper, brass, steel and crystal.

Dedicated plug-in 120V power source, no batteries.
Standard USA plug
3 meters | 10 feet
Black
USB-C
5V, 1A

Networking

Connectivity:
Networking applications:
Urban connectivity range:
Clear line of sight range:

LoRaWAN
iOS, Android
Up to 2km | 1.2 miles
Up to 15km | 10 miles

Compatibility

Pipe size range
Pipe materials:

0.75", 1", 1.25", 1.5", 2"
Copper L, Copper M, PVC SCH40, PVC SCH80, CPVC, galvanized, stainless steel, PEX, PE, solid-wall ABS

Data

Accuracy:
Repeatability:
High flow capability:
Low flow capability:
Resolution:
Factory calibration:

+/- 1-2% of flow reading, dependent on pipe size
+/- 0.2% of flow reading
Unlimited: maximum flow for pipe size
0.2GPM to 0.5GPM, dependent on pipe size
.000000 six decimal points
Each device is calibrated on a certified primary flow standard over its entire range with a four-point flow test in a flow metrology laboratory.

Calibration certificate:
K-factor calibration:

Available upon request
Software calibration tool available in app. Adjust expected vs. actual water flow usage
Software calibration tool available in app. Remove ultrasonic noise if present at point of installation.

Zero point calibration:

Software

Mobile OS supported:
Water saving tools:
Alerting:
Cost allocation:
Data access sharing:
Inclusive design:
API data availability:

iOS, Android
Usage alerts, budgets, bill input, Dollarize™
Time-based alerting, volume-based alerting, scenario-based alerting, flow start, flow stop.
Visibility and data availability for multiple meters
Unlimited data sharing and access sharing
Color-blind data color pallet, large buttons
Open API for data access available upon request
